

Peterson SYSTEM DAY

03 SEPTEMBER 2021

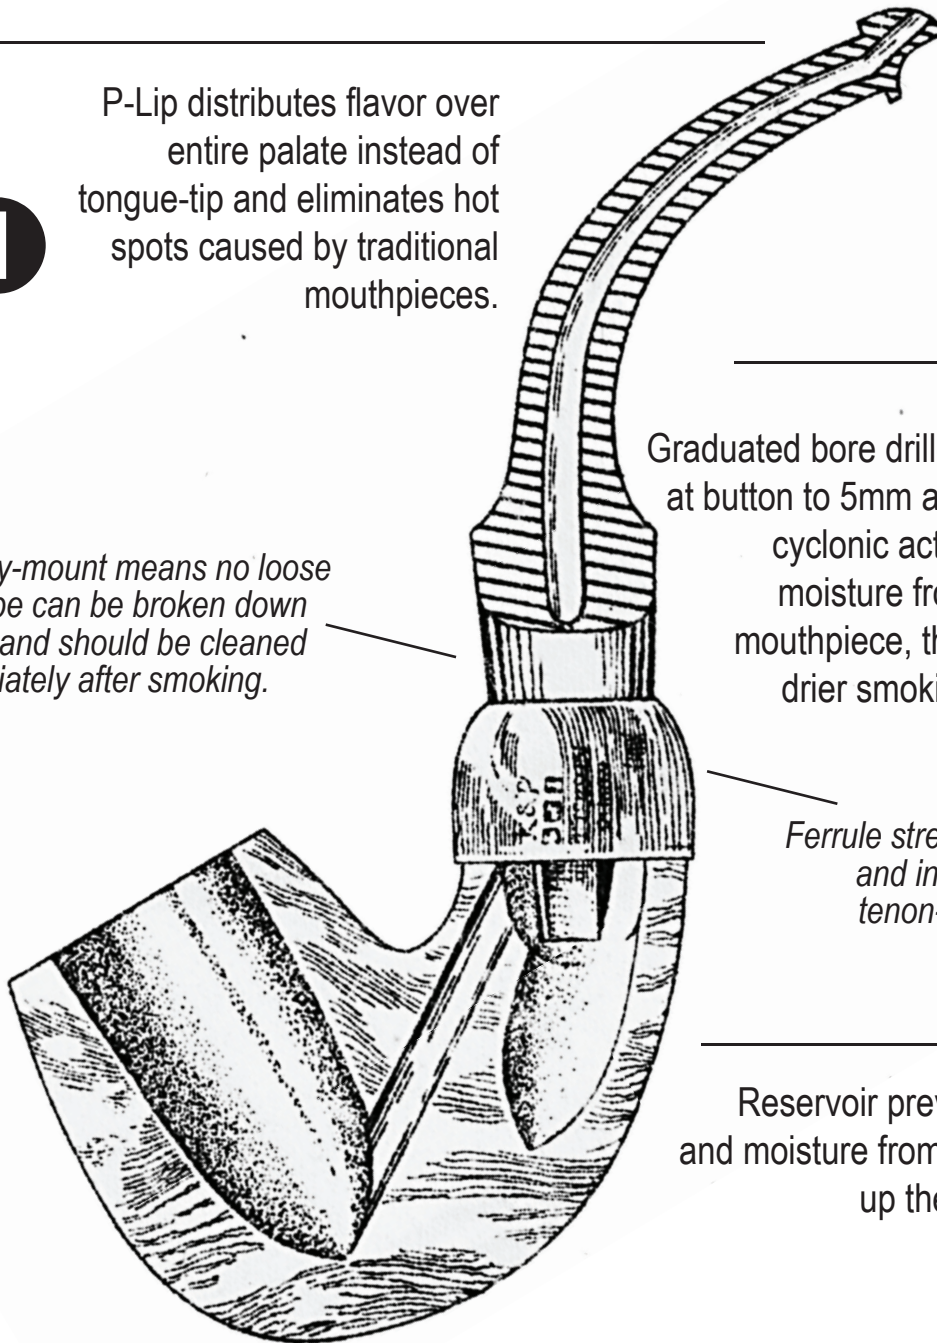

123rd Anniversary of Charles Peterson's Final Patent

1

P-Lip distributes flavor over entire palate instead of tongue-tip and eliminates hot spots caused by traditional mouthpieces.

"Push" army-mount means no loose tenon. Pipe can be broken down while hot and should be cleaned immediately after smoking.

2

Graduated bore drilled from 1.5mm at button to 5mm at tenon creates cyclonic action, preventing moisture from traveling up mouthpiece, thereby creating drier smoking experience.

Ferrule strengthens mortise and insures snug tenon-mortise fit.

3

Reservoir prevents tars and moisture from traveling up the air hole.

"NOTHING BEATS THE SYSTEM"

STRONGEST PIPE ON THE PLANET
